

SenteApp

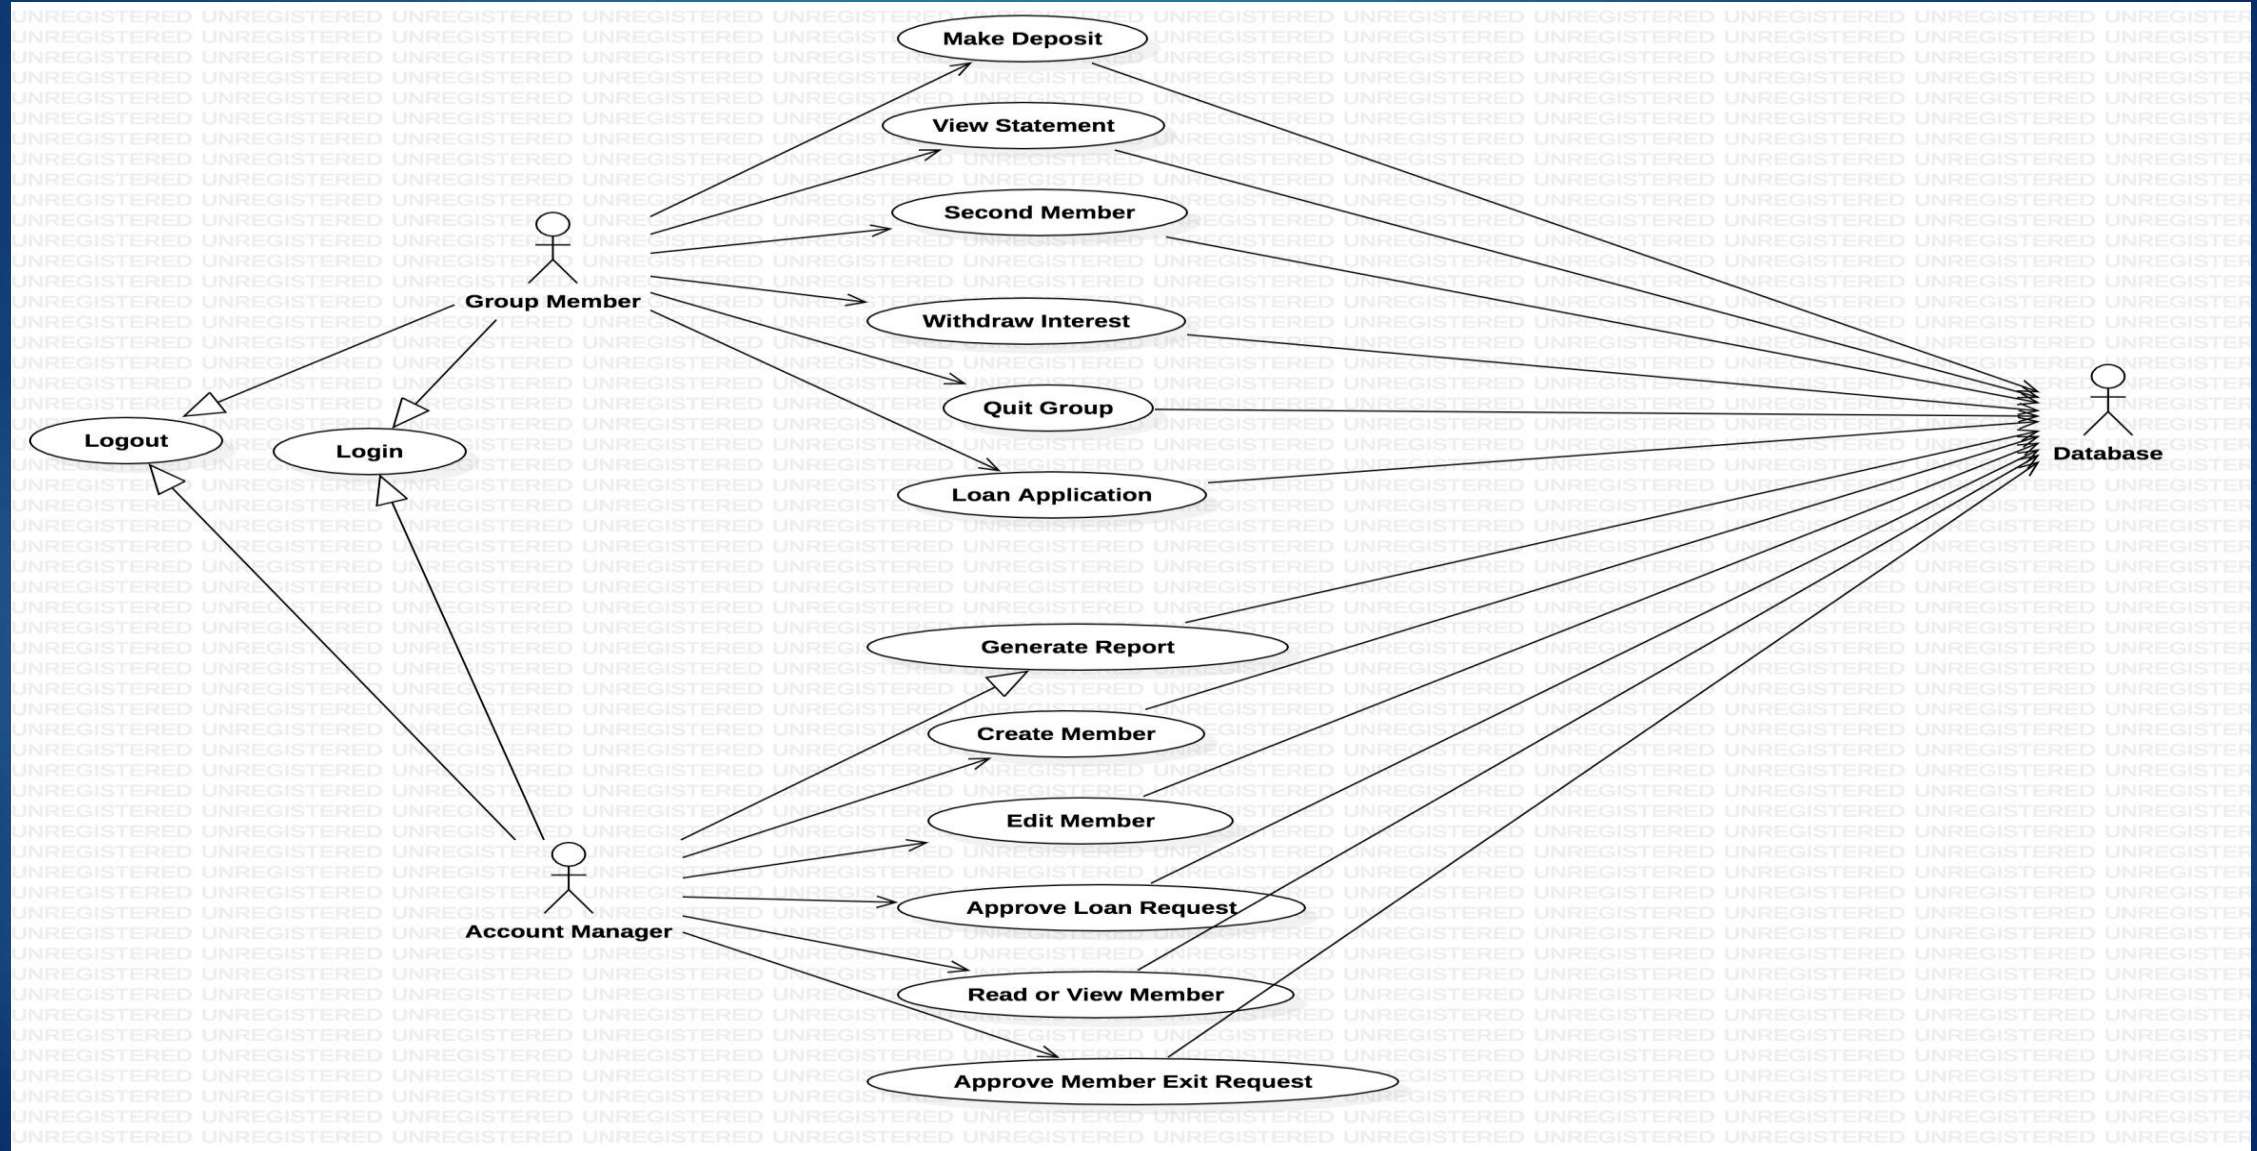

Introduction

- ▶ A mobile/Web application that tracks savings of individuals belonging to a group.

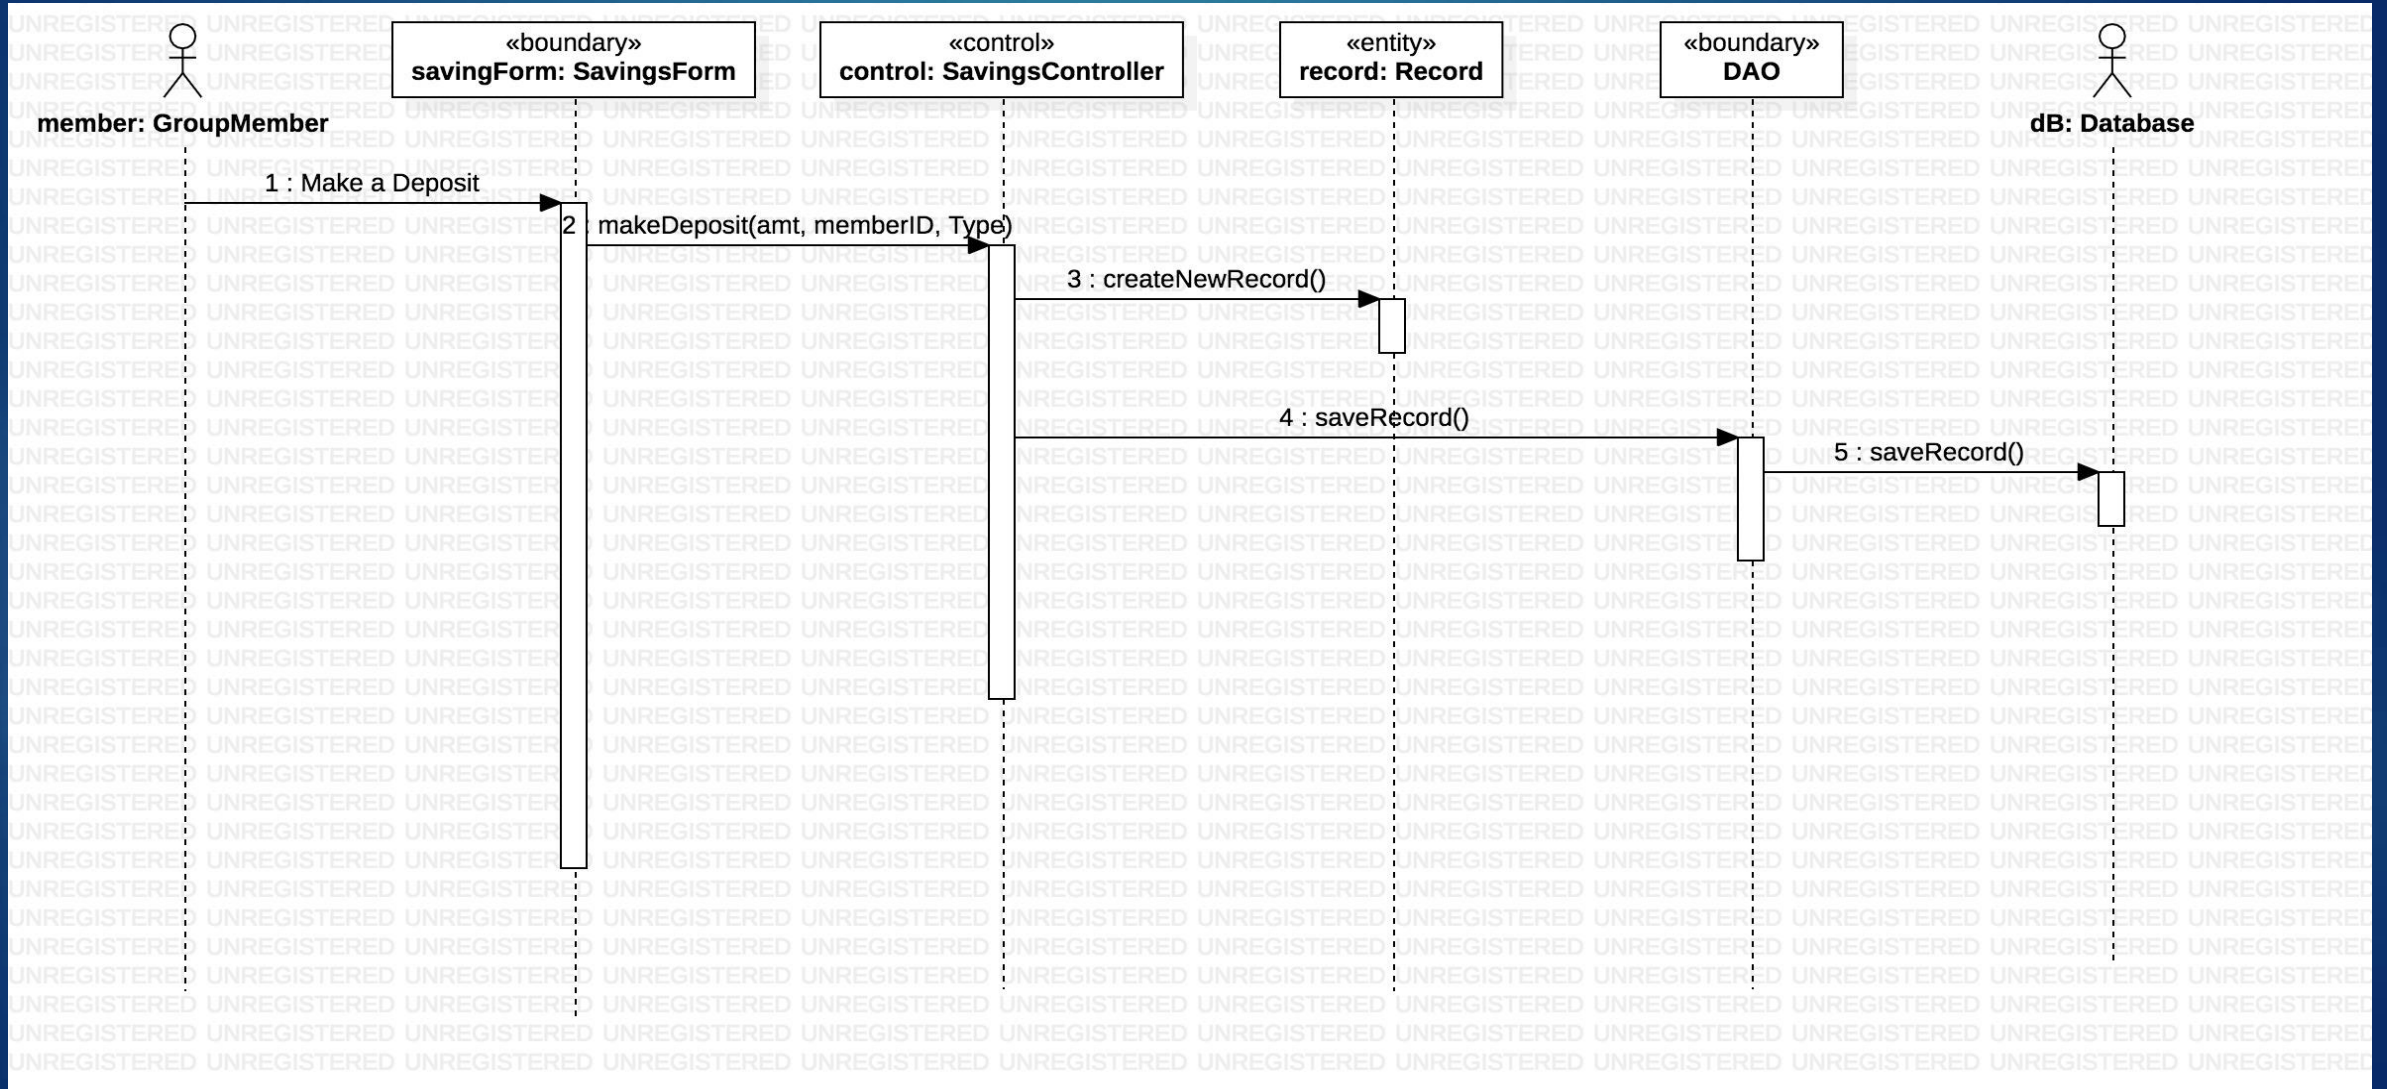

Problem Statement

- ▶ People love to save money as a group with a goal of raising enough capital to start investment. They manually collect cash amongst themselves and these records are kept in MS excel sheets.
- ▶ This has proved to be inefficient in terms of security, data loss, and time.
- ▶ We have developed a solution to automate the process, safe guard members' data, track their savings, issue them with loans and easy to use.

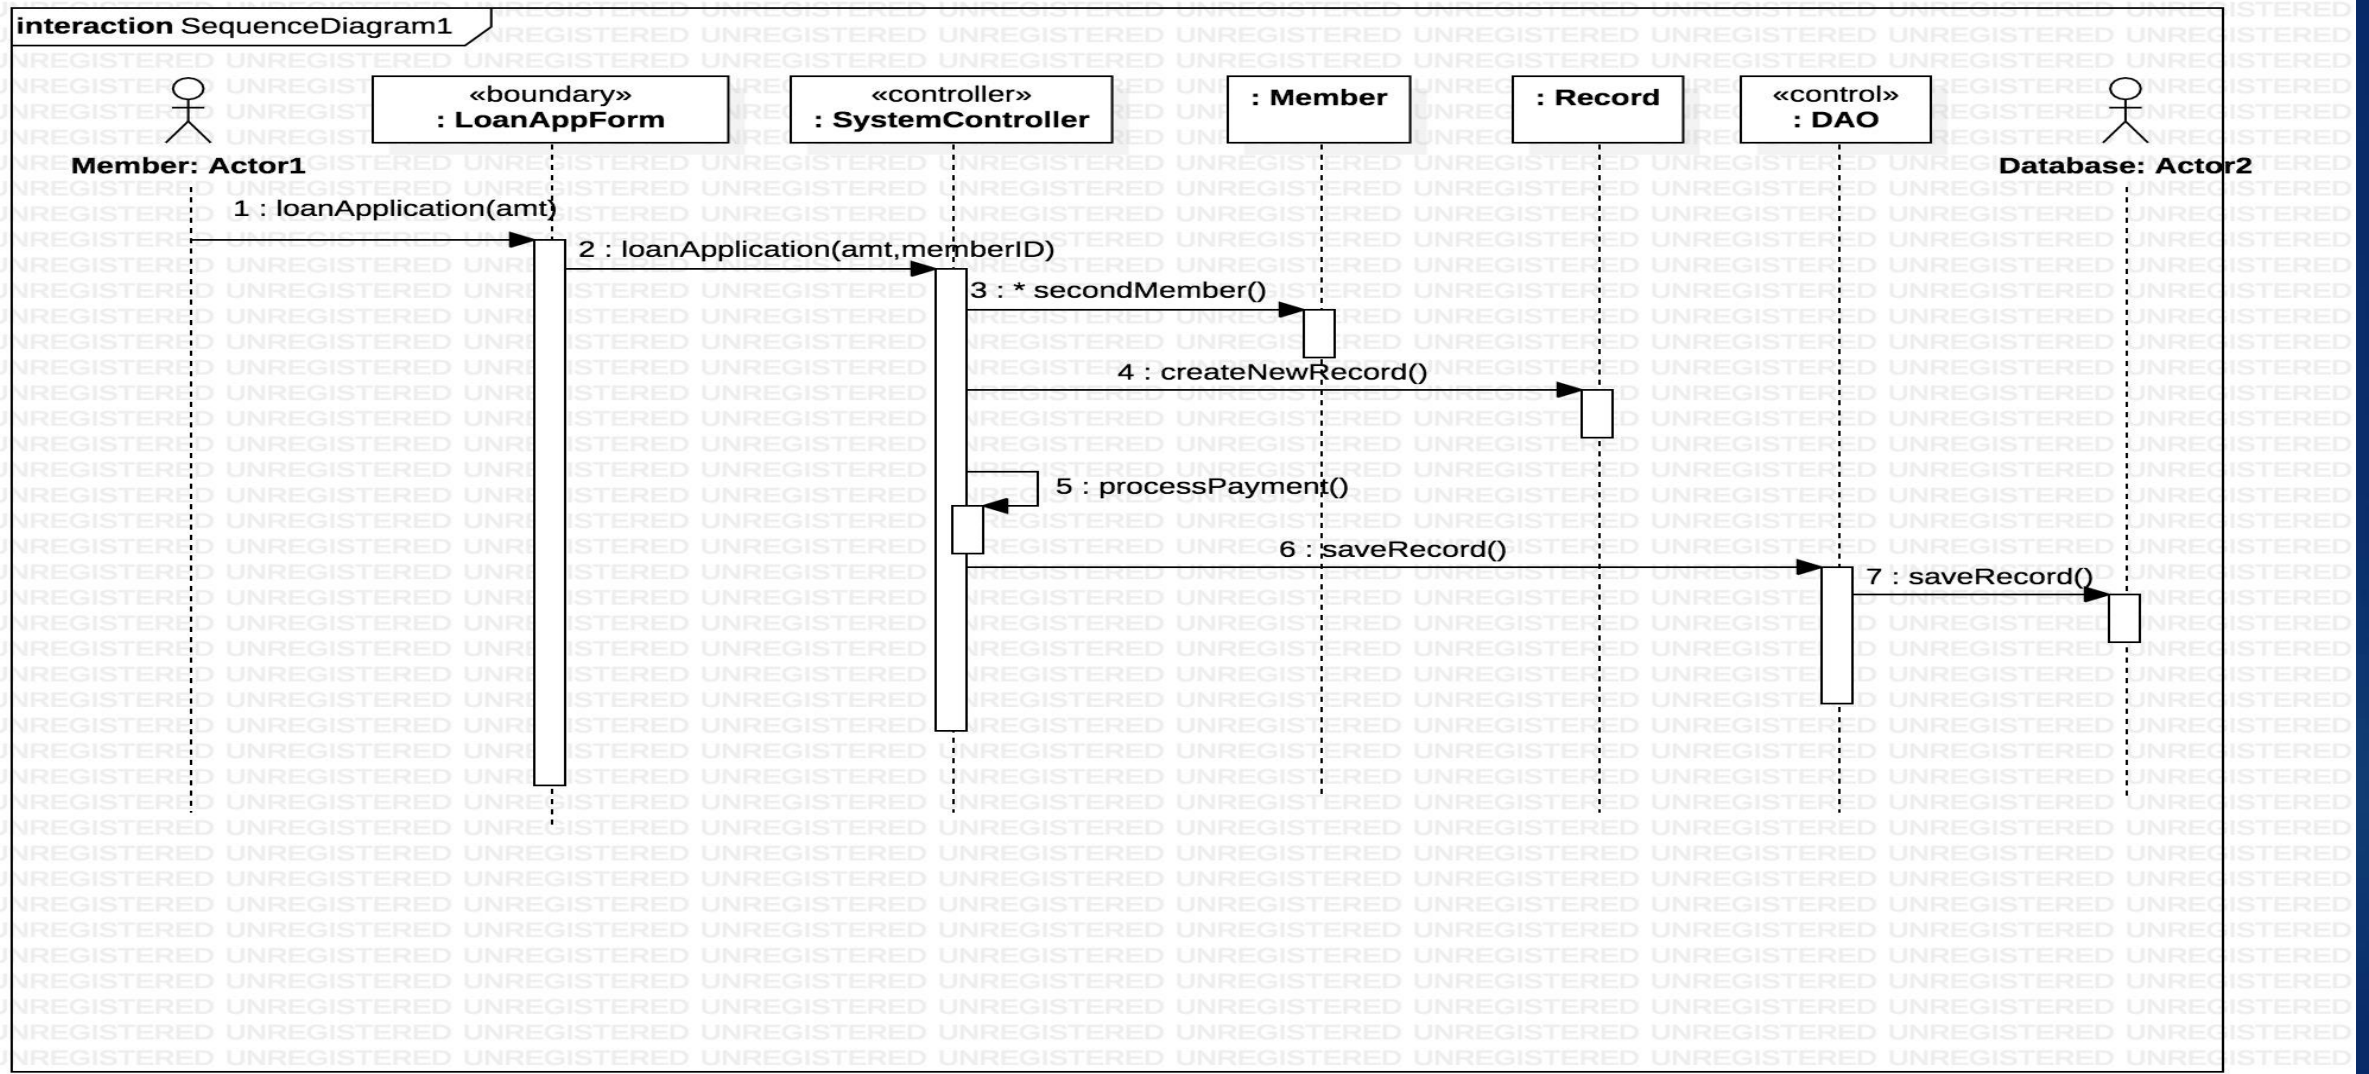

Use Cases
